ADDIXO

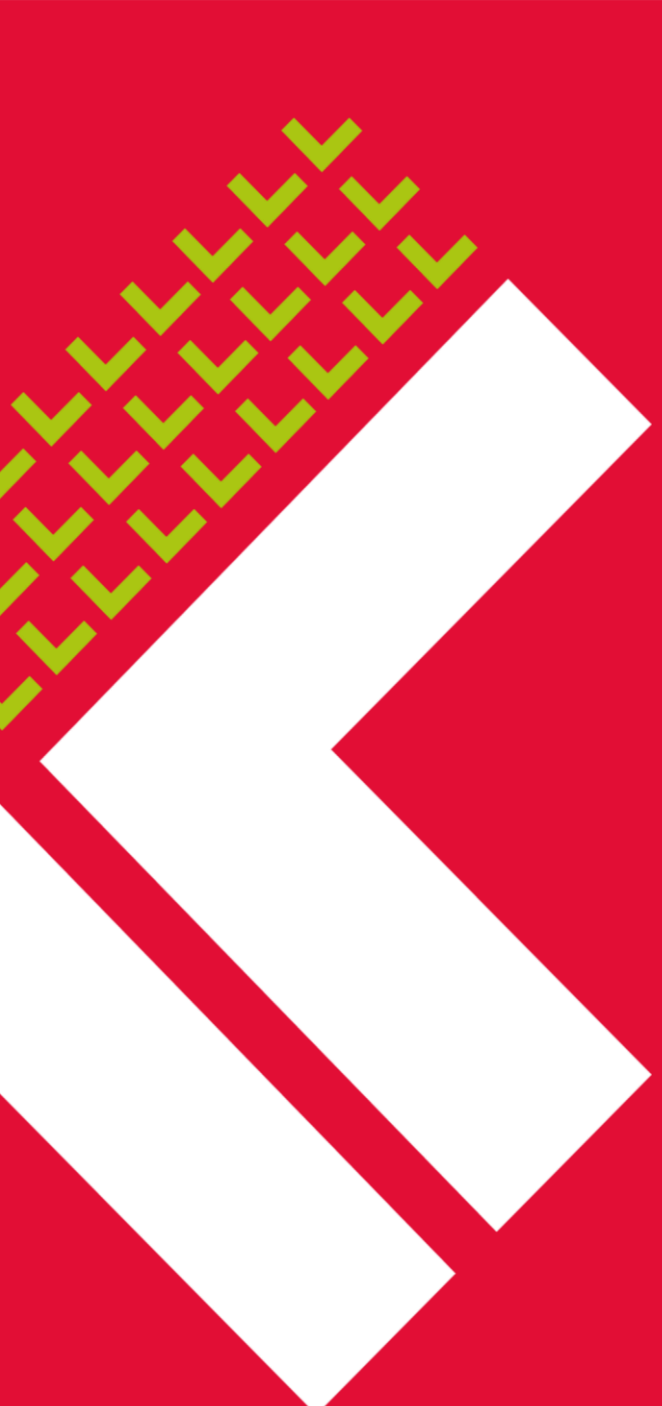

Custom Digital-Ready Smart Equipment

ENGINEERING OF CUSTOM MANUFACTURING PRODUCTION/TEST EQUIPMENT WITH VERY HIGH TECHNOLOGICAL CONTENT FOR A FACTORY 4.0

We help our industrial customers grow and gain operational performance with smart, connected production equipment that enables them to:

- Deliver very high-quality manufacturing products
- Develop and optimize their production platforms
- Optimize their production processus
- Scale up their industrial capabilities
- Reduce ressources consumption (i.e energy)
- Gain in agility and reactivity
- Enhance their human resources
- Enter the era of the digital industry

YOUR PARTNER FOR DEMANDING AND INNOVATIVE PROJECTS

- ✓ **PRODUCTION LIGNES AUTOMATION**
- ✓ **INTEGRATION OF ROBOTS**
- ✓ **INDUSTRY VISION SOLUTIONS**
- ✓ **TECHNOLOGICAL UPGRADE FOR MANUFACTURING EQUIPEMENT**
- ✓ **AUTOMATED ASSEMBLY LIGNES AND TEST BENCHES**
- ✓ **VALUE-ADDED DUPLICATION OF EQUIPMENT**

Digital Manufacturing Solutions

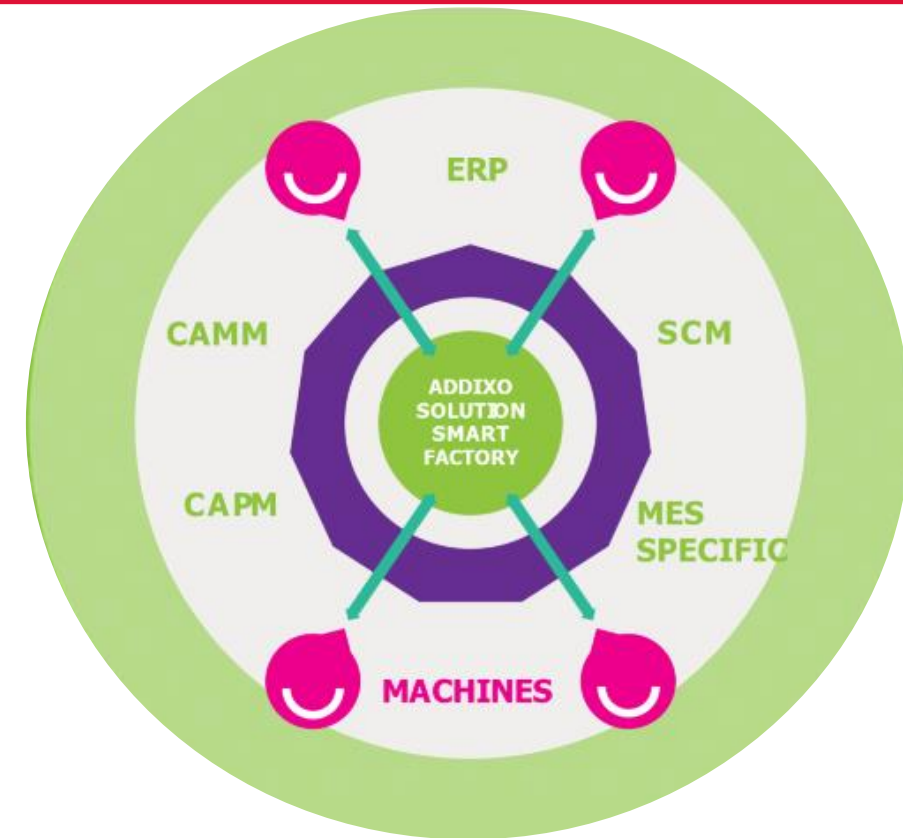

SUCCEED IN THE DIGITAL TRANSFORMATION OF YOUR PLANT

- ✓ CUSTOMIZED MES SOLUTION WITH « ADDIXO SMART FACTORY »
- ✓ INTEGRATE YOUR OWN MES/SI WITH YOUR MACHINES
- ✓ OPERATE, MAINTAIN AND SECURE YOUR MES INFRA
- ✓ AI - TRANSFORM YOUR DATA INTO VALUE
- ✓ AUGMENTED REALITY FOR PRODUCTION EXCELLENCE

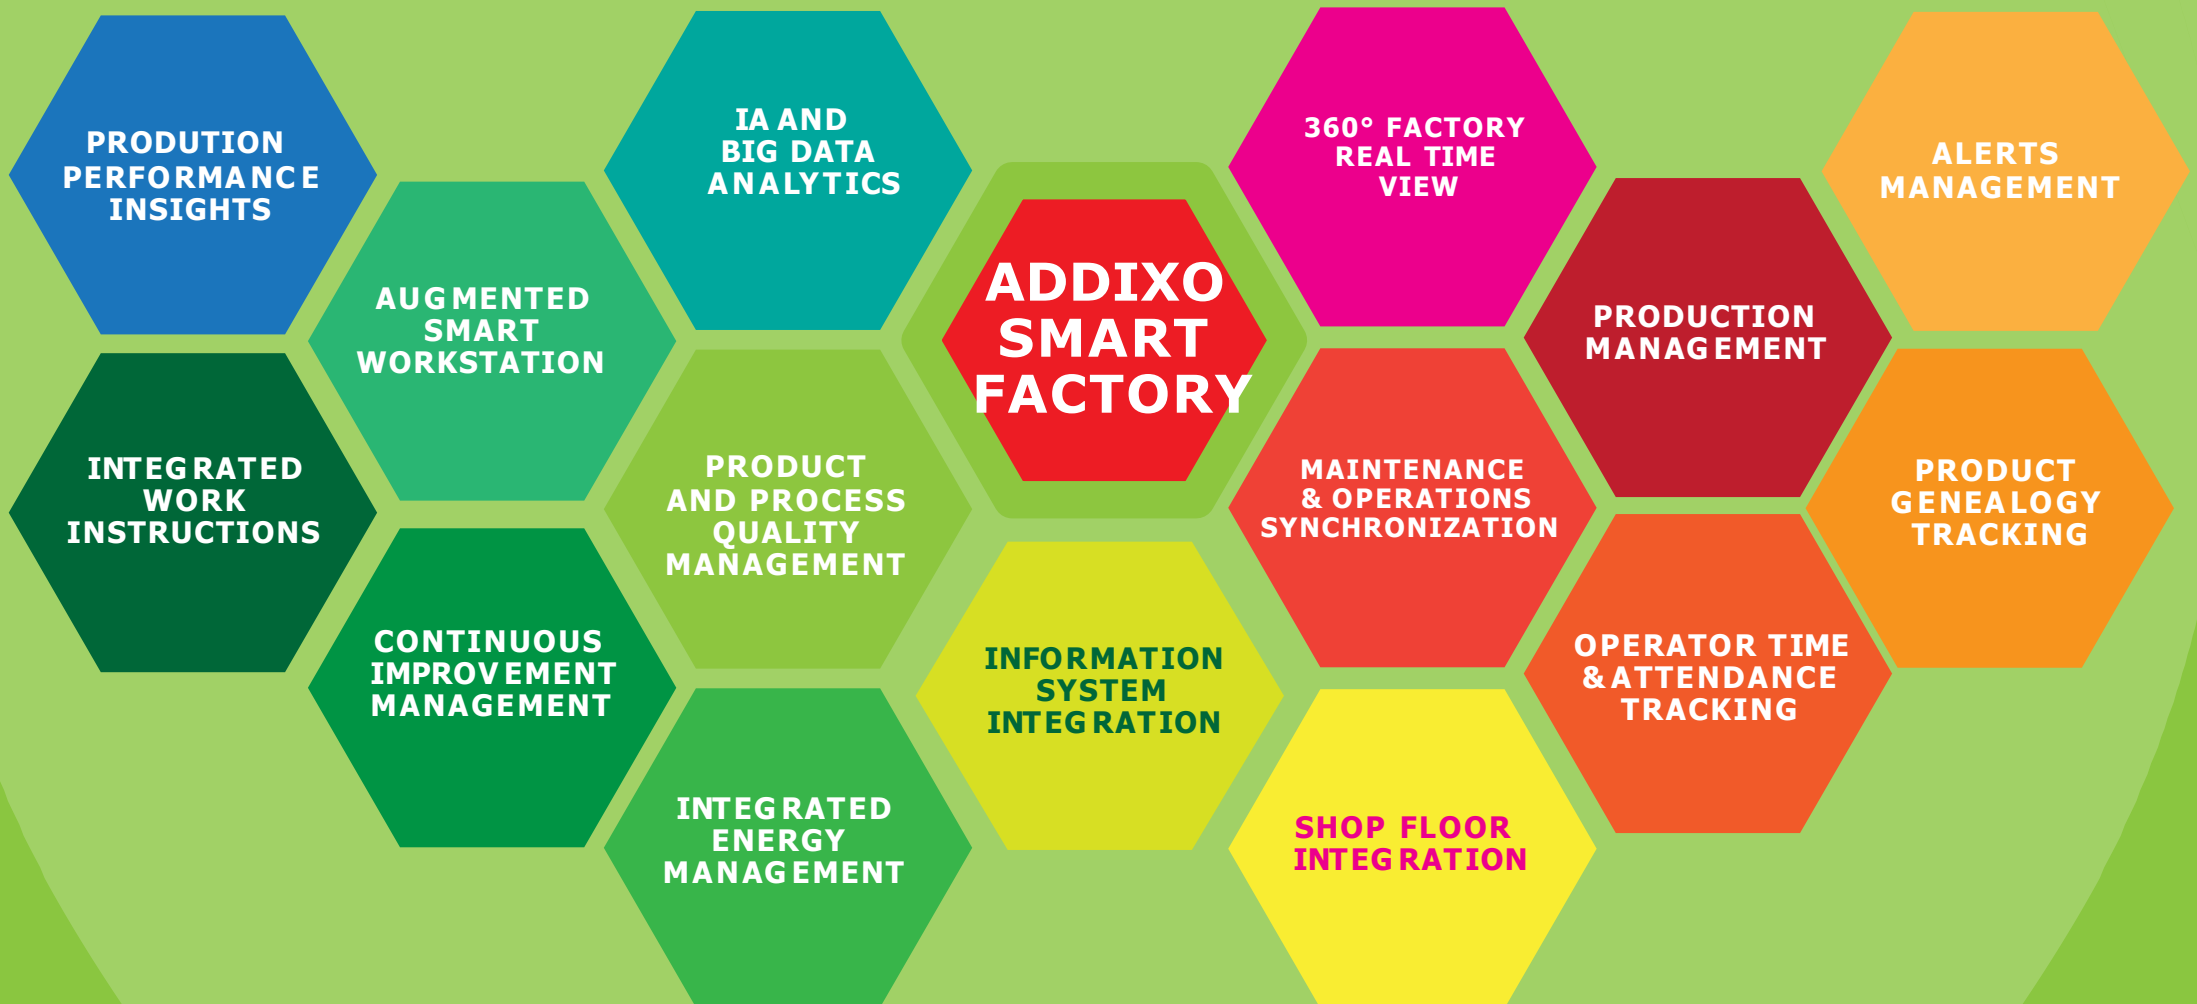

ADDIXO SMART FACTORY FOR "ONE TRUTH, SINGLE TRUTH, AN EASILY SHARED TRUTH "

- Modern solution focused upon integration of manufacturing processes management
- Specifically designed for the manufacturing process
- Integration of your shopfloor information system (MES) with your machines
- Automatic collection of production data in real time.
- Integration of your Information System with the equipment
- Flexible deployment model (cloud or on-premises - multi-UAP - multi-sites)
- Customized on-demand
- Cost effective
- Flexible and adapted licensing models
- Full offering from project implementation-maintenance-managed solution

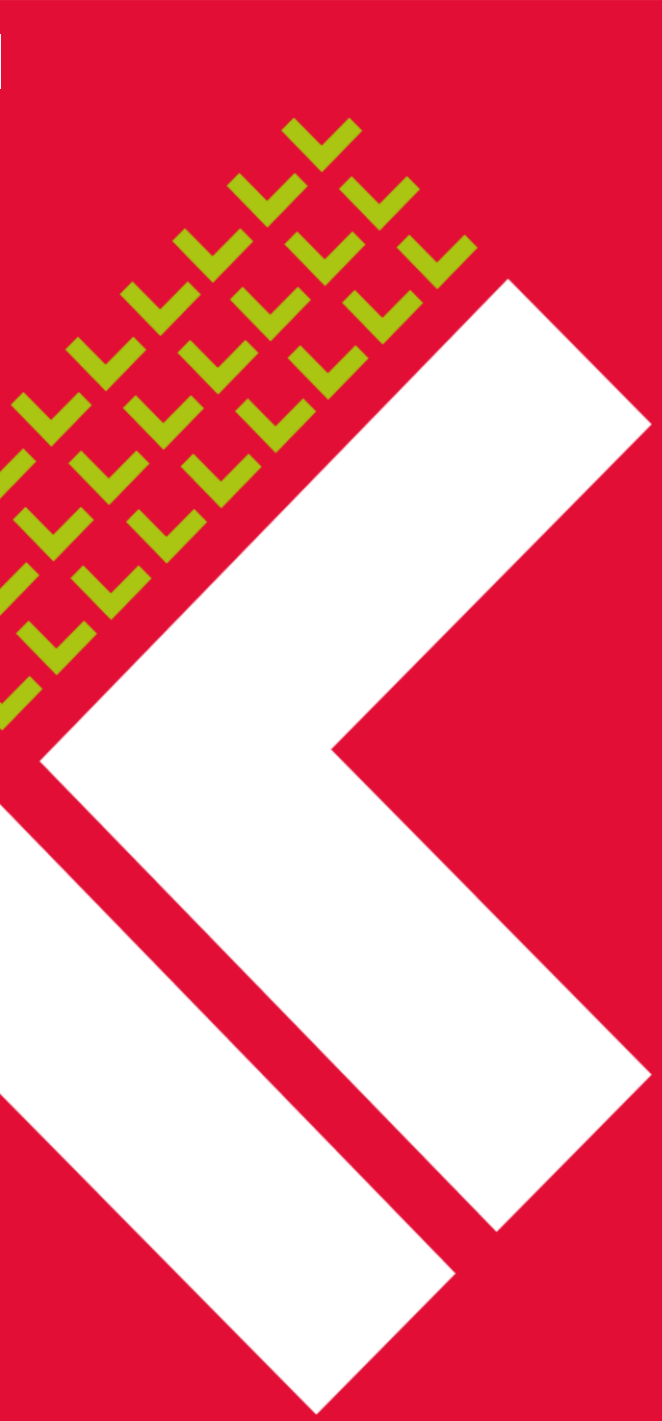

MOM/MES PERSONALISED SOLUTION

DIGITAL > CONNECTED > FLEXIBLE > GREEN

ADDIXO SMART FACTORY IN A WINK

- 
- ✓ Digitization of production processes in the factory
 - ✓ Integration with equipments
 - ✓ Operations planning
 - ✓ Lifecycle of Manufacturing Orders (MO)
 - ✓ Stops and causes of stoppages
 - ✓ Change of die and ok start
 - ✓ Product non-conformities
 - ✓ Process capability
 - ✓ Control cycle and product quality
 - ✓ Process compliance
 - ✓ Process data
 - ✓ Quality and process compliance
 - ✓ Continuous improvement
 - ✓ Material consumption
 - ✓ Energy consumption
 - ✓ Team management
 - ✓ Real-time production monitoring
 - ✓ Synchronization between maintenance and production
 - ✓ Smart workstation with augmented reality
 - ✓ Visual management
 - ✓ Integration with the IS
 - ✓ Operational Dashboard
 - ✓ Data analysis

- ✓ Automated data collection
- ✓ Data reliability
- ✓ Real-time management of operations
- ✓ Reactivity in case of drifts
- ✓ Synchronization of stakeholders
- ✓ Flexibility and agility
- ✓ Material optimization
- ✓ Energy optimization
- ✓ Team motivation
- ✓ Process stability
- ✓ Paperless factory
- ✓ Green factory

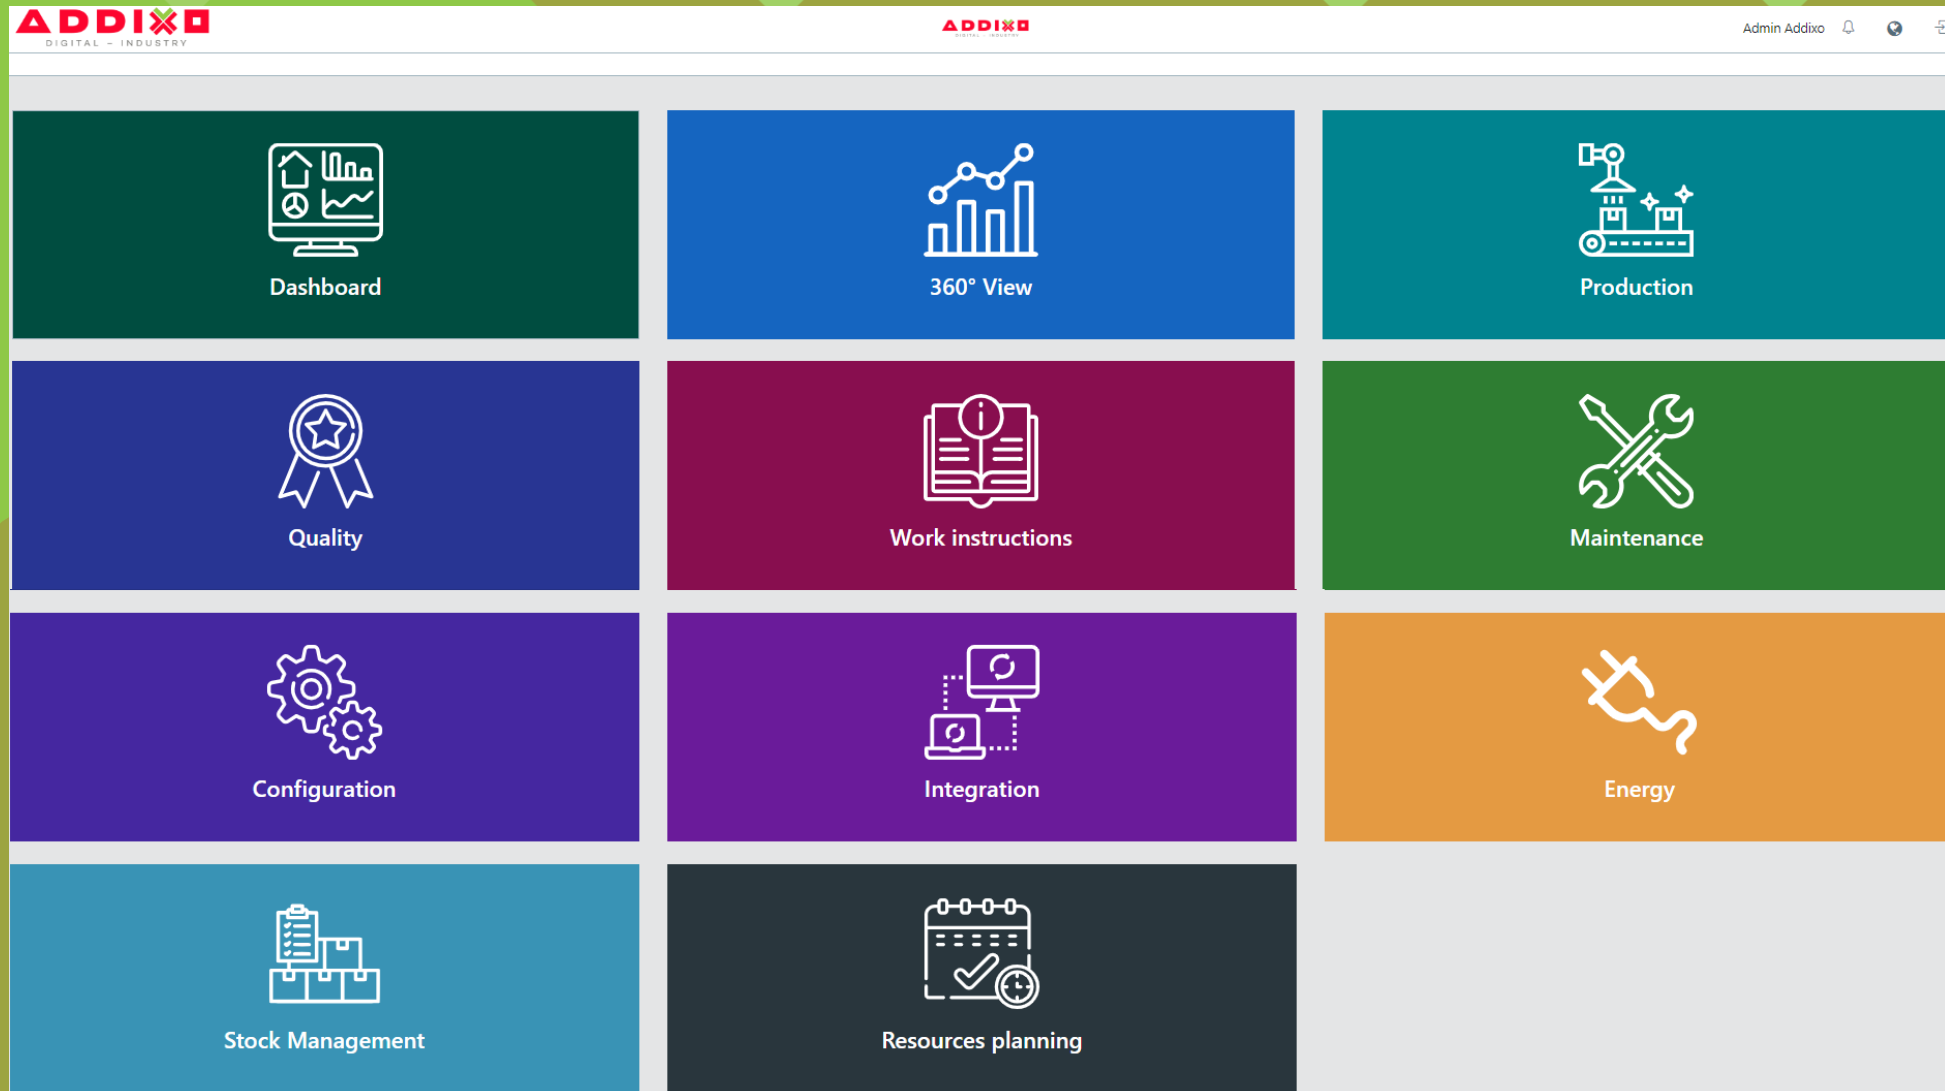

« *OPERATIONAL EXCELLENCE IN AN INTEGRATED 4.0 GREEN FACTORY* »

**EXCELLENCE

OPTIMIZATION**

**PERSONAL
MOTIVATION**

**AGILITY AND
FLEXIBILITY**

Integration

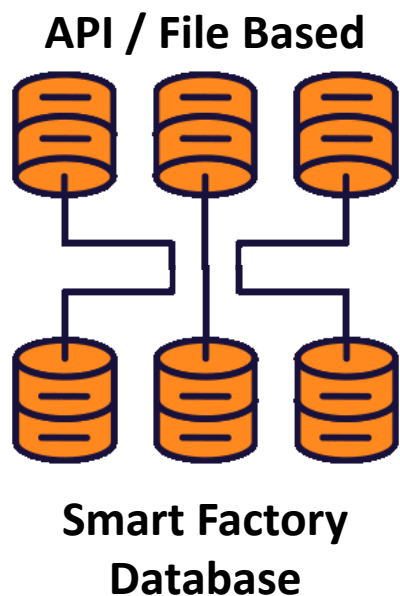

ADDIXO Smart Factory Integration module offers **Real-time exchange** of information with **existing Information system** (ERP, CAMM, CAPM, WMS..) , including production orders, inventory levels, quality control and work orders.

This provides **enhanced coordination** between production activities and broader business processes resulting in :

- more streamlined workflows,
- reduced manual data entry errors,
- elimination of duplication of efforts,
- optimized resource utilization.

- Ensure consistency by synchronizing data like product definitions, bill of materials (BOM), Maintenance operations and Production orders progress.
- Tailor the integration frequency for each entity (Production order, Product, User,..) based on requirements, enabling precise control over the timing and cadence of data synchronization.
- Use different data integration options to upload data either through file formats like CSV or Excel, or through API connectivity.

Production

The ADDIXO Smart Factory Production module provides a diverse range of tools designed to facilitate the digitalization and optimization of production processes in factories.

This highly adaptable module is engineered to model the production process and the Work Order Workflow to ensure complete management and thorough tracking of production operations from start to delivery.

Facilitating the creation, scheduling, and tracking of production orders (P.O.), enabling seamless management of manufacturing processes.

The screenshot displays the ADDIXO Production module interface. On the left, a sidebar lists various production units: Presse N°05 : ARB35-03, Presse N°02 : ARB85-01, Presse N°03 : ARB35-01, Presse N°04 : DG125-01, Presse N°06 : ARB25-02, Presse N°09 : DG50-05, Presse N°10 : DG50-02, Presse N°13 : DG80-01, Presse N°15 : DG100-01, Presse N°16 : DG110-01, and Presse N°17 : DG120-01. The main area shows a 'P.O. List' with filters for 'Workshop' and 'Line'. A modal window titled 'AddManufacturing Order' is open, containing the following fields and controls:

- P.O. Number**: A text input field.
- Order number**: A text input field with the label 'N° de commande'.
- Workshop**: A dropdown menu.
- Line**: A dropdown menu.
- Responsible**: A dropdown menu.
- Quantity**: A text input field.
- Options**: Radio buttons for 'M', 'A' (selected), and 'SA/ASR'.
- Product**: A dropdown menu.
- Mold**: A dropdown menu.
- Material**: A dropdown menu.
- Changeover**: A dropdown menu.
- Planification**: A dropdown menu.
- Comment**: A text area.
- Buttons**: 'Verify', 'Cancel', 'Save', and 'Save and Add'.

Quality

The Quality Module in ADDIXO Smart Factory provides a complete approach to managing and improving product quality throughout the manufacturing lifecycle.

It contributes to operational excellence, compliance with standards, and the delivery of high-quality products to customers through a variety of tools such as Statistical Process Control, QRQC, 5S and monitoring Cards.

Providing Root cause analysis and **QRQC** for quality issues helping identify the underlying causes of deviations.

Maintenance

ADDIXO Smart Factory Maintenance Module is designed to efficiently manage and optimize maintenance activities in a manufacturing environment. It serves as a centralized platform to oversee, schedule, and track all maintenance-related tasks and operations.

This module serves as a crucial intermediary bridging the gap between the shop floor and the Computer-Aided Maintenance Management (CMM) system, enabling and automating the involvement of the maintenance team in addressing operational needs.

Create and manage Intervention demands and Intervention sheets whether through manual initiation or automatic triggers upon the detection of critical downtime events.

Intervention request →

- An intervention demand typically represents a request or need for maintenance, whether it's scheduled preventive maintenance or an unscheduled corrective action.
- This demand can be initiated based on predefined maintenance schedules, equipment conditions, or triggered by unexpected issues.

- Maintain an extensive log of downtime occurrences, capturing detailed records of each instance.
- Downtimes are systematically recorded, whether automatically identified from machines or manually inputted, ensuring a comprehensive record for analysis, troubleshooting, and continuous improvement.
- Provide insights into operational inefficiencies, root causes of disruptions, and patterns affecting production.

</

- Manage and control molds by establishing distinct maintenance levels and monitoring their life cycle in real-time.
- Generate and oversee mold maintenance sheets, ensuring precise management and upkeep of mold assets throughout their operational lifespan.

360° View

The ADDIXO Smart Factory **360° View** module provides a comprehensive perspective on factories and workshops, encompassing a managerial viewpoint. This module offers the continuous tracking and analysis of various key performance indicators (KPIs), non-conformity issues, and downtime events enabling manufacturers to enhance operational efficiency, maintain product quality, minimize downtime, and respond rapidly to deviations in real-time.

"**Factory View**" offering a comprehensive overview of the production landscape. Within this view, users can navigate through various production sites, gaining insights into the status of each line. This includes the ability to identify operational lines in production, those currently halted, or those not yet scheduled for production.

"**Workshop View**" presents an overview of the lines situated within workshops. This view provides valuable insights into the status of each line, indicating whether it is in a halted state, in production, undergoing a changeover in addition to visual warnings and alerts in the event of unplanned production or forced stoppages. For each production line, it offers detailed information, including the production order, product details, schedule, production progress, conformity rate, and Overall Equipment Effectiveness (OEE).

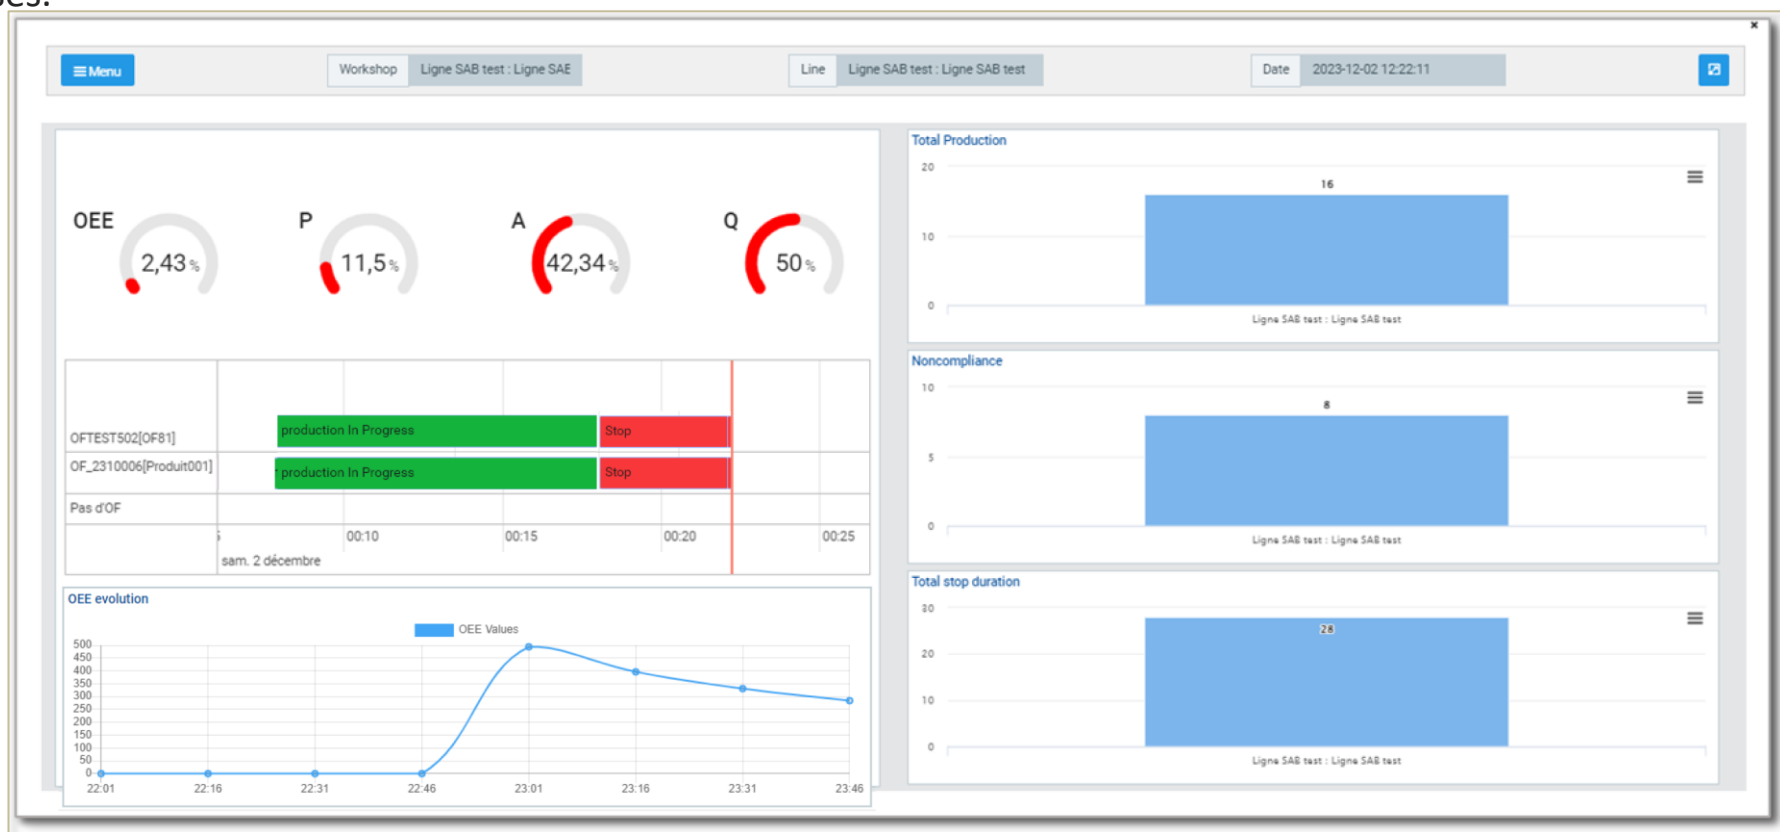

“**Management View**” Clearly displays a list or visual representation of all production lines within each workshop. This view provides a centralized and easily accessible view of all production lines, enhancing visibility into the entire manufacturing environment.

“**Line Details**” offers a comprehensive overview of manufacturing performance. It prominently displays essential metrics such as Overall Equipment Effectiveness (OEE), comprising Availability (A), Performance (P), and Quality (Q), allowing users to assess the efficiency and quality of each production line. The interface includes informative graphs illustrating the evolution of OEE over time, total production quantities, quantities of non-conformities, and downtime durations. This visual representation facilitates quick and thorough analysis, enabling users to identify trends, pinpoint areas for improvement, and make data-driven decisions for optimizing production processes.

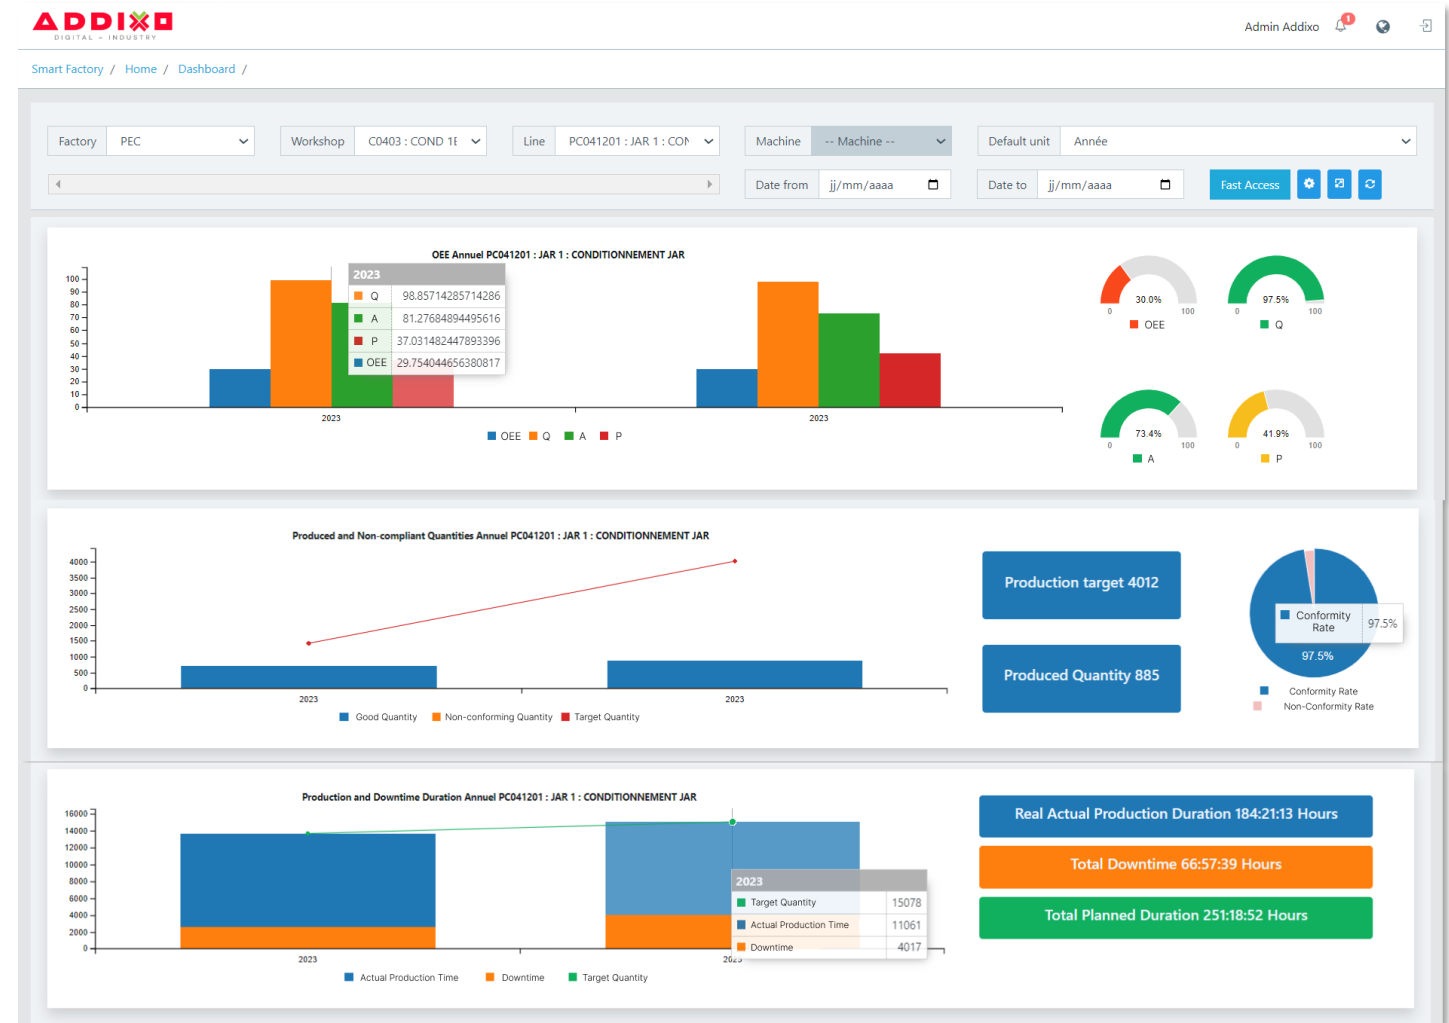

Dashboards

Smart Factory's "Dashboard" module ensures traceability and historization by offering intuitive visualizations of real-time and historical data, supporting data-driven decision-making in manufacturing operations.

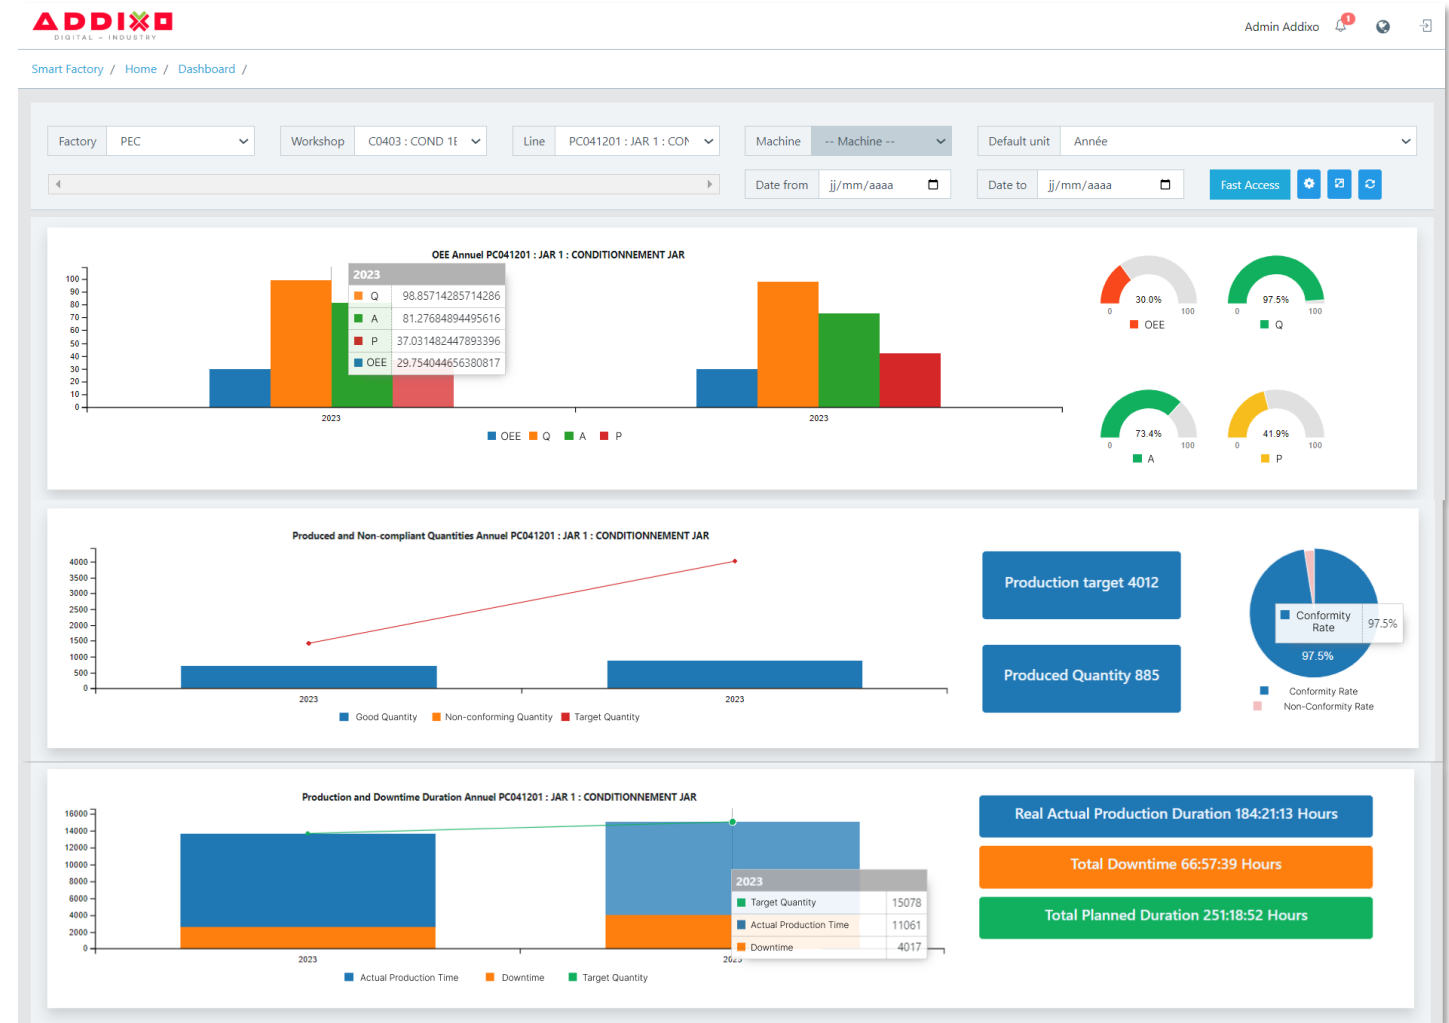

- This module includes all kinds of information on process parameters, quality metrics, and performance indicators over time.
- This historization aspect is valuable for compliance, audits, and continuous process optimization, as it provides a comprehensive record of how manufacturing processes have evolved.

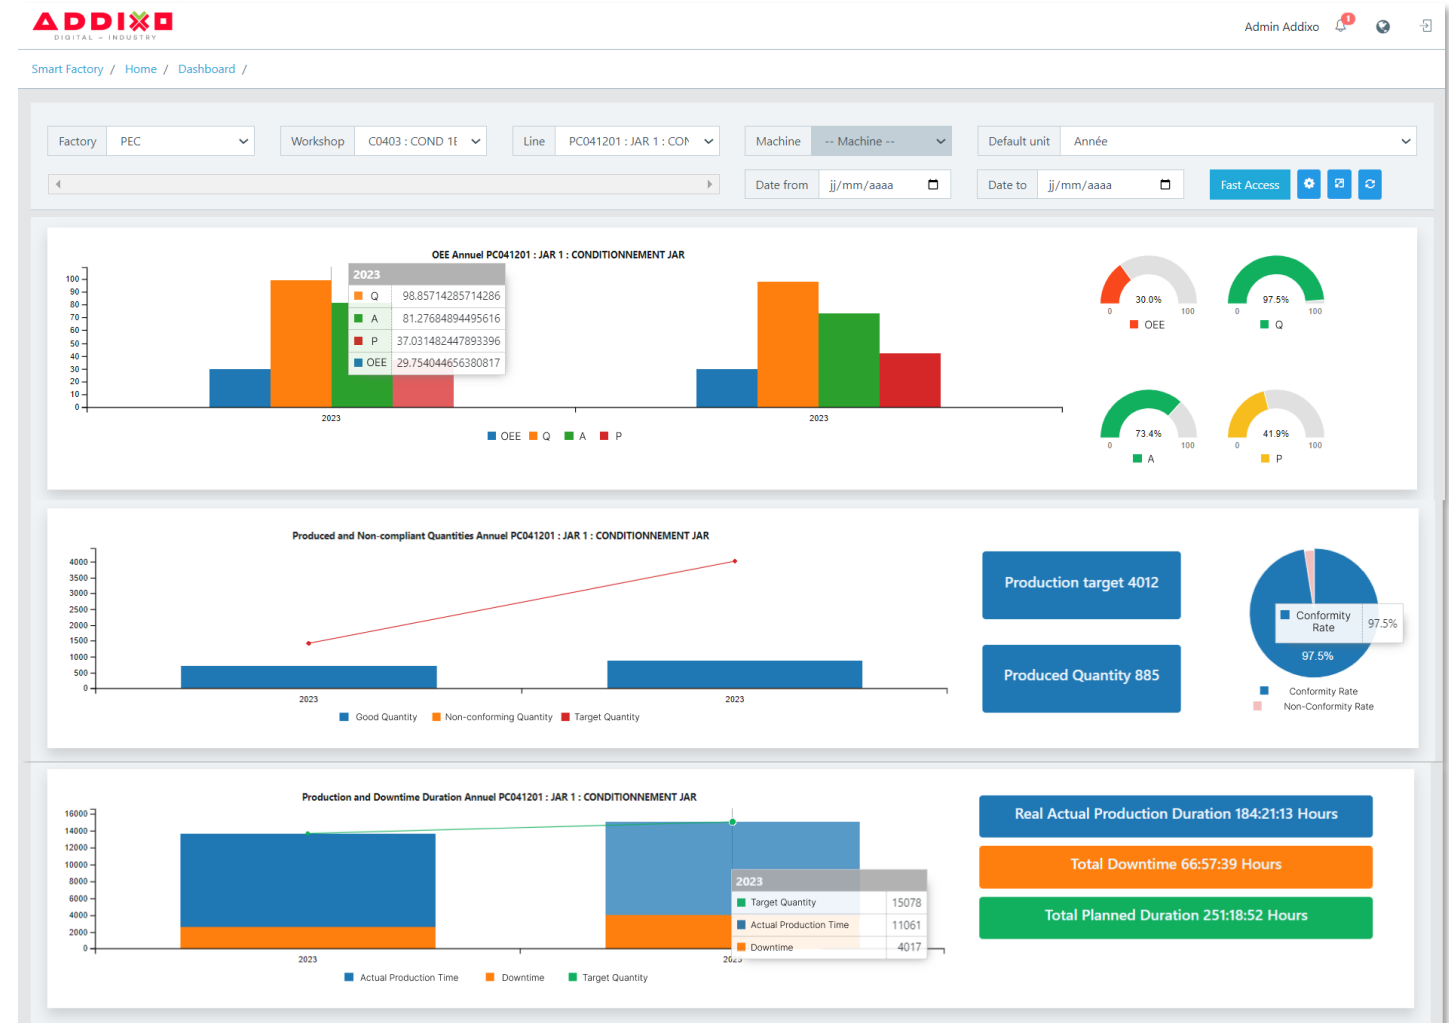

- This module includes all kinds of information on process parameters, quality metrics, and performance indicators over time.
- This historization aspect is valuable for compliance, audits, and continuous process optimization, as it provides a comprehensive record of how manufacturing processes have evolved.

Energy

The Energy module of ADDIXO Smart Factory is designed to monitor and manage the energy consumption within a manufacturing facility. This module focuses on capturing, analyzing, and optimizing energy usage to promote sustainability and cost efficiency

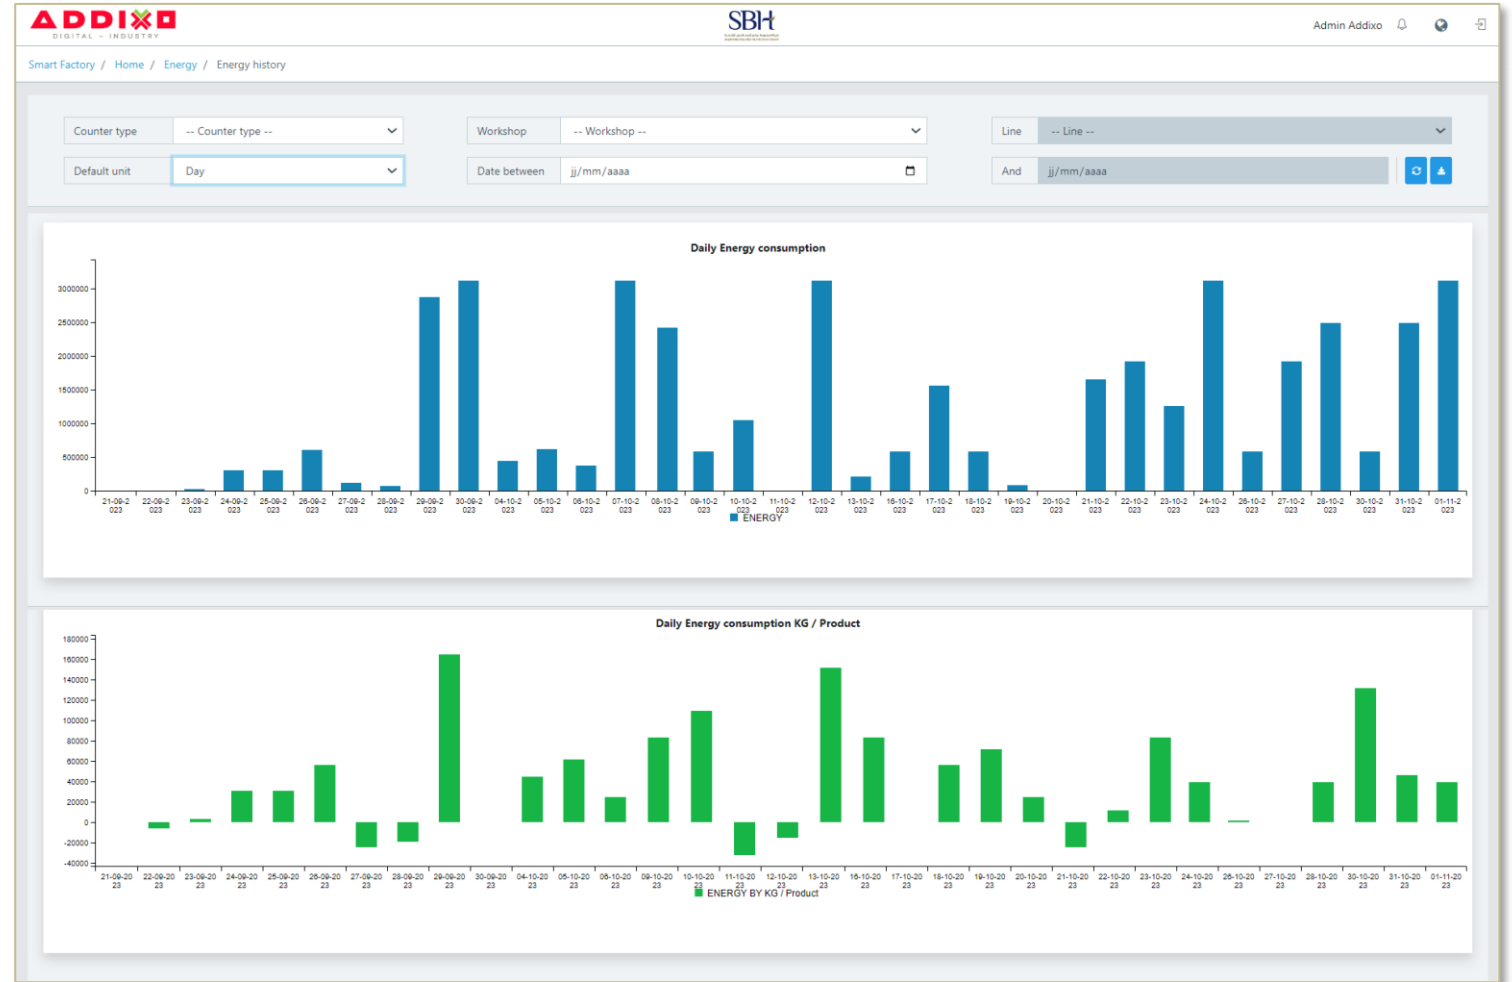

- Dynamic and intuitive graphs provide a real-time visual representation of the evolution of energy parameters entered, facilitating quick and efficient monitoring of energy consumption trends.
- Notably, the module provides notifications to designated users, alerting them when energy consumption exceeds predefined limits or thresholds.

- The module , also ,offers a historical dashboard showcasing the energy consumption history of the factory over a specified period. This enables users to track performance trends and identify areas for improvement.

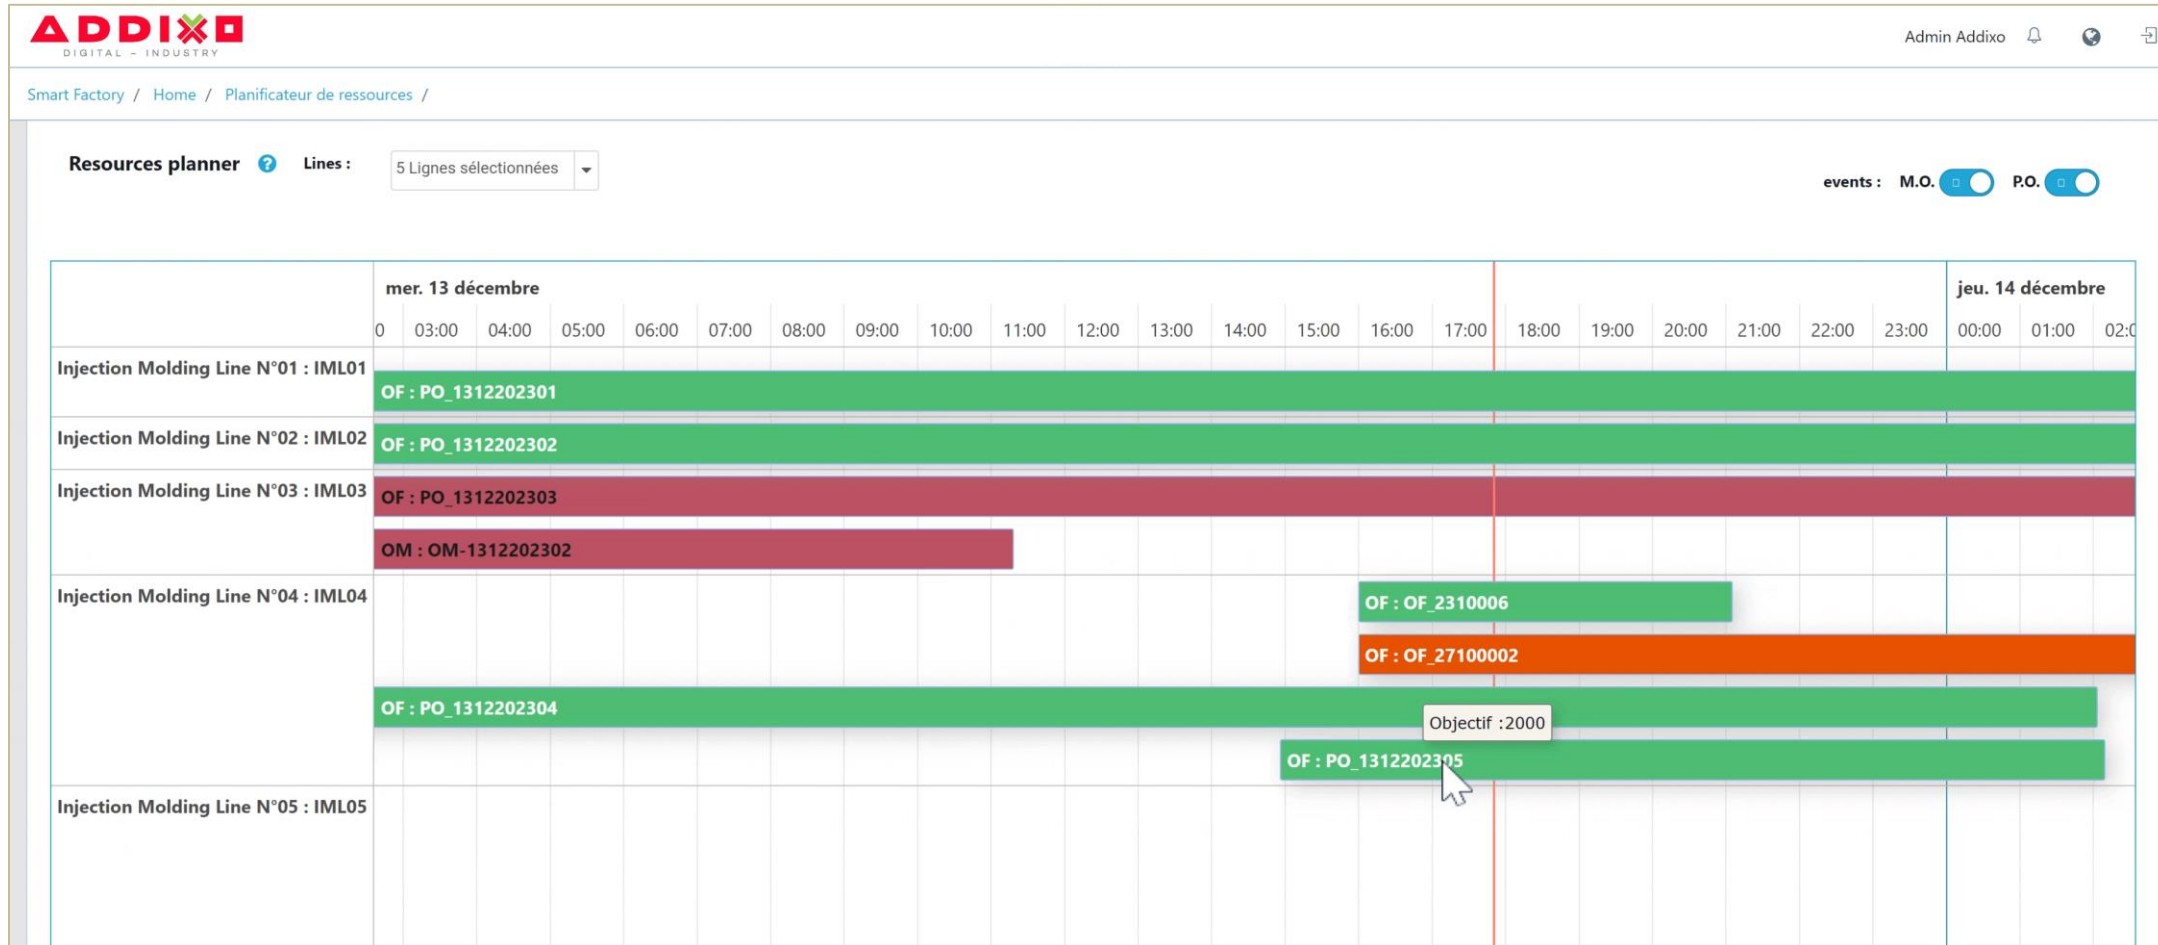

Resource Planning

The ADDIXO Smart Factory **Resource planning** module Efficiently manage production and maintenance schedules across multiple lines with a visual timeline display for streamlined resource allocation and decision-making.

The resource planning module offers a clear, organized view of all production and maintenance orders, whether planned or ongoing, facilitating easy tracking and optimization of resource utilization in real time.

Work Instructions

The work instruction module of ADDIXO Smart Factory functions as a centralized repository, providing easy access to a variety of information within organized folders, streamlining communication and ensuring comprehensive documentation for efficient operations.

This module enables users to upload instructional files for machines , products and manufacturing processes , supporting a variety of file types, making it versatile for accommodating different forms of instructions, manuals, and guides .
